ACME PACKET

Mission

Acme Packet (NASDAQ: APKT) is the leader in session delivery network solutions. We enable the delivery of interactive communications - voice, video and multimedia sessions - and data services across IP network borders.

Our vision

The evolution from TDM to IP interactive communications introduces significantly more communication service choices and application possibilities. More choices and possibilities require more control at the borders between IP networks to assure interoperability, security, quality and regulatory compliance. A future of increasing choices and possibilities
Unified service evolves - any device, any one, any time.

Session Border Control

Session border control is a service delivery architecture encompassing many different product categories. Our Net-Net family of session border controllers, session-aware load balancers, session routing proxies and multiservice security gateways supports multiple applications in enterprise networks and fixed line, mobile, over-the-top and application service provider networks.

These applications range from VoIP trunking to hosted enterprise and residential services to fixed-mobile convergence. Our products satisfy critical security, service assurance and regulatory requirements in these networks and support multiple protocols - including SIP, H.323, MGCP/NCS, H.248 and RTSP - and multiple border points, including service provider access and interconnect and enterprise access and trunking.

Distribution & support

Acme Packet sells to and supports its customers using both direct and indirect channels. We leverage the expertise of over 150 distribution partners, including the following organizations that operate worldwide: Alcatel-Lucent - Avaya - Black Box - Catalyst Telecom - Dimension Data - Ericsson - General Dynamics - IBM Global Services - Motorola - NEC - Nokia-Siemens-Networks - ScanSource, Inc. - Siemens Enterprise Networks - and many more.

Partners

Acme Packet partners with solution resellers, systems integrators, complementary equipment manufacturers, professional services companies and consultants to make session border control solutions a reality.

Acme Packet has 710 employees in 33 countries worldwide.

Portfolio

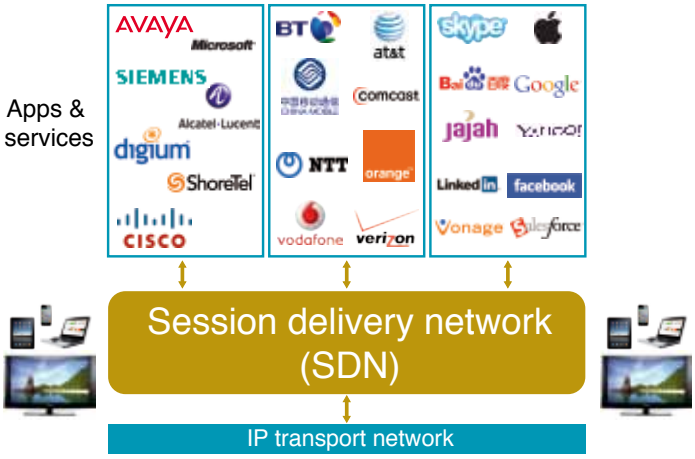
Acme Packet's session delivery network solutions enable the trusted, first-class delivery of next-generation voice, data and unified communications services and applications across IP networks.

Session delivery networks (SDNs) operate "in the middle" to bridge the gap between the underlying IP transport network and applications and services. SDNs session-enable IP infrastructure and ensure the security, service assurance and regulatory compliance of interactive IP communications in service provider, enterprise and contact center networks.

acme packet

ACME PACKET'S SESSION DELIVERY NETWORK PRODUCT PORTFOLIO CONSISTS OF:

- Session border controller (SBC) - controls communication sessions at IP access and interconnect network borders.
- Session-aware load balancer (SLB) - scales SBC capacity.
- Session manager - provide essential session control functions to deliver trusted, first-class voice, video and unified communications in fixed line, mobile and enterprise networks.
- Multiservice security gateway (MSG) - controls femtocell and fixed-mobile convergence services (interactive communications and data) over untrusted Internet borders Policy exchange controller (PEC) - enables the seamless commucation and control of policy information within LTE or IMS networks and across LTE network borders.
- Session routing proxy (SRP) - routes SIP sessions to-and-from IP and TDM network borders.
- Application session controller (ASC) - enables developers to integrate Web applications with IP communications services.
- Interactive session recorder (ISR) - records, stores and archives voice, video and multimedia communications.



MARKET SEGMENTS:

- Products for mobile service providers
- Products for fixed line service providers
- Products for the enterprise, contact centers and government
- Products for OTT/ASPs

About ScanSource Communications Europe

ScanSource Communications Europe is a leading pan-European distributor of voice, data, video and infrastructure products. We sell only to resellers and are dedicated to optimising the channel for the benefit of our reseller and vendor partners. Alongside the core distribution elements of inventory, logistics and financing, we offer a variety of tools and services to help you be more efficient, effective and successful. In Europe, ScanSource also distributes automatic identification and data capture (AIDC) and point-of-sale (POS) solutions through its ScanSource Europe business unit.
ScanSource Communications Europe is part of ScanSource, Inc. (est. 1992; NASDAQ: SCSC), who distributes AIDC and POS, voice, video and converged communications equipment and electronic security solutions in North America and Latin America. Catalyst Telecom, ScanSource's North American convergence division, is the largest distributor of convergent voice solutions in the world.
